

Dear all

I am pleased to inform that the SFO Quote Engine (SQE) tool is now Live. As a part of planned measures being undertaken to digitalise the supply chain, this is one foundational element that helps us to organise and retrieve supplier data from a digital repository. This will serve as our internal google search tool for pricing information and has all our past data that's relevant in one data base and application that can now be used by all authorised SCM team members.

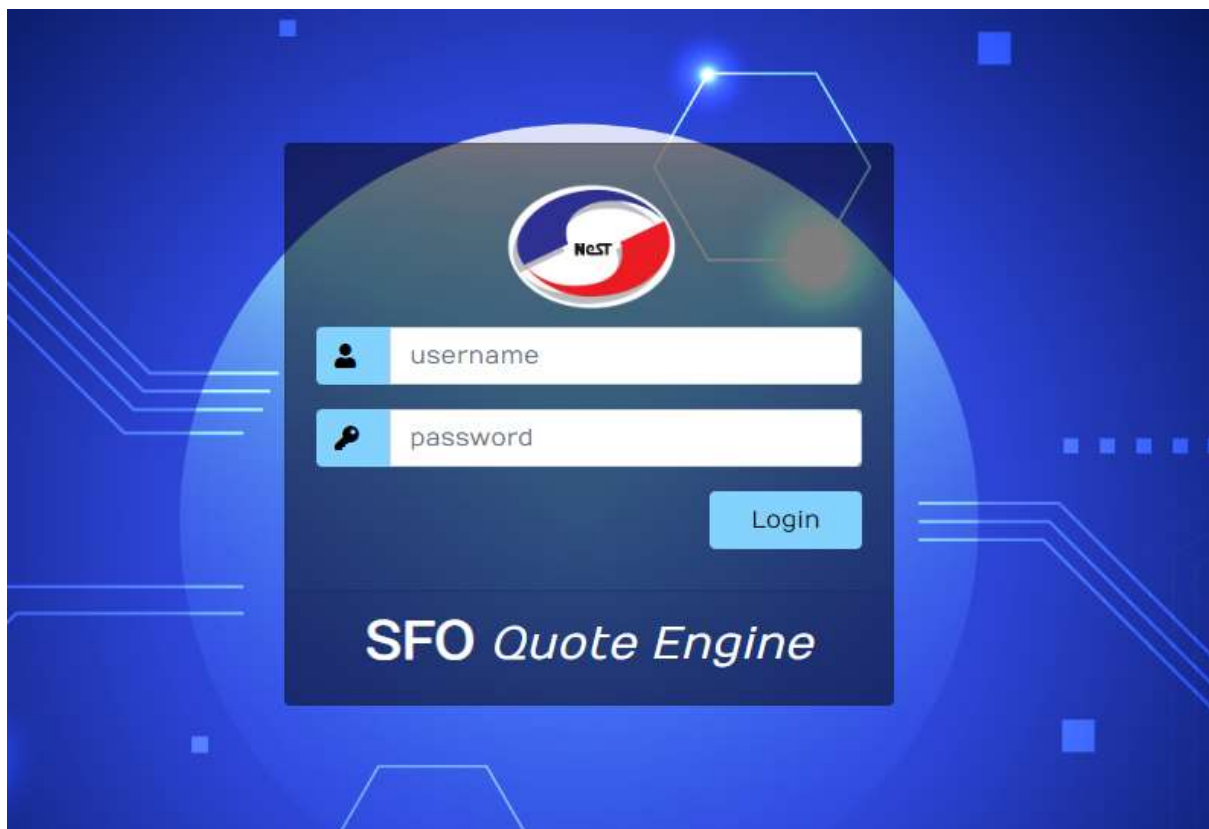

We have completed Phase 1 and there's more planned in order to derive more value and with integrations in the next phases. Details below for reference.

Many Thanks to Sam for owning and driving, Dipu for Project Managing the initiative and Bibin, Aswathy for leading the software development activities.

Also, appreciate the guidance from Mujeeb, Namasivayam and Hariendran.

Well done Team, lets maintain the traction to complete the next phases.

For any Queries on this Tool, please contact Dipu George.

---

#### Phase1

- Quote data digitization
- Data now consistent and available in uniform format
- Single Part search Information with multiple parameters enabled on database

- Data upload and search enabled for multiple users
- Quote repository acts as a database ready for data integrations with external sources

Key Benefit – Quote repository and part number search

#### Phase2

- Data modification with EDIT and DELETE rights
- BOM upload for price availability check .
- Identification of unpriced parts
- Download price information

Key Benefit -- TAT improvement and benchmarking price reference

#### Phase 3

- Information on unpriced parts for new RFQs
- Integration with outlook to generate RFQ request to prospective vendors
- Email triggers for quote request and negotiation.

Key Benefit – TAT improvement , faster supplier reach ,Early price negotiation for first time right price.
